

STOCK MARKET ANALYSIS REPORT

Analysis of Apple Inc. (AAPL), Microsoft Corporation (MSFT), and NVIDIA Corporation (NVDA)

Date: 31 August 2026

1. Introduction

This report analyzes three major US-listed technology companies—Apple, Microsoft and NVIDIA—using price trends, P/E ratio, market capitalization, recent news and performance indicators. The purpose is educational: to compare the companies' growth drivers, strengths and risks.

2. Key Market Indicators

Stock	Price (approx.)	Market Cap	P/E
Apple (AAPL)	\$315.27	\$4.67T	36.10
Microsoft (MSFT)	\$513.53	\$3.81T	N/A*
NVIDIA (NVDA)	\$219.61	~\$5.2T	N/A*

*P/E values can vary by provider and reporting basis; current market pages may display different trailing/forward measures. Values are included as a snapshot rather than a trading recommendation.

3. Apple Inc. (AAPL)

Apple has a very large installed customer base and a diversified services business. Its stock has remained near record levels in 2026, while investors are focused on AI capabilities, product launches and the CEO transition. MarketWatch lists a market capitalization of about \$4.67T and P/E of 36.10. Apple's investor-relations page showed a delayed intraday price around \$315.27 on August 31.

4. Microsoft Corporation (MSFT)

Microsoft combines enterprise software, Azure cloud computing, AI and gaming. The stock closed at \$513.53 on August 28, 2026, and recent reporting highlighted a six-session advance. The company remains exposed to the question of how efficiently large AI infrastructure investments translate into revenue and profit.

5. NVIDIA Corporation (NVDA)

NVIDIA is the strongest direct beneficiary of AI infrastructure demand among the three. Its stock was around \$219.61 intraday on August 31. NVIDIA's market capitalization was above \$5T, and recent earnings/news showed exceptionally strong AI and data-center demand. The stock also experienced notable volatility after earnings, illustrating the high expectations priced into the shares.

6. Recent News & Performance Indicators

Apple: Investors are watching the September product cycle, AI strategy and leadership transition. Recent reporting has also emphasized Apple's strong long-term shareholder returns.

Microsoft: Microsoft shares recently posted a strong multi-session run, while investors continued to assess cloud growth and the economics of AI capital expenditure.

NVIDIA: NVIDIA's latest earnings were a major market catalyst. Reports cited quarterly revenue of about \$96B and guidance of roughly \$108B for the next quarter, reinforcing the strength of AI infrastructure demand.

7. Comparison

Factor	Apple	Microsoft	NVIDIA
Main driver	Devices + Services + AI	Cloud + Software + AI	AI chips + Data Center
Growth outlook	Moderate–High	High	Very High
Risk	Moderate	Moderate–High	High
AI exposure	Increasing	Very High	Extremely High

8. Conclusion

All three companies have strong competitive positions but different risk-return characteristics. Apple is the most mature and diversified of the three. Microsoft offers a balanced combination of cloud, enterprise software and AI growth. NVIDIA has the strongest direct exposure to the AI infrastructure boom and therefore the highest growth potential, but also higher expectations and volatility. For an educational comparison, NVIDIA appears strongest on growth, Microsoft on balance, and Apple on ecosystem strength and maturity. This report is for academic purposes and is not financial advice.
